PROFESSIONAL SUMMARY

MSc Computing Science student (Cyber Security & Artificial Intelligence) at Radboud University with two internships in Machine Learning (ML) and Generative AI, now building AI security tools for LLM red-teaming and vulnerability prioritisation. Seeking an AI Security, ML or Cybersecurity internship in the Netherlands: summer 2027 or thesis internship 2027–2028; valid Dutch residence permit.

EDUCATION

MSc Computing Science, specialisation Cyber Security & AI Aug 2026 – Aug 2028 (expected)
Radboud University, Nijmegen, Netherlands
Bachelor of Engineering (B.E.), Artificial Intelligence and Data Science Nov 2022 – Jun 2026
Maharaja Institute of Technology, Mysuru, India | CGPA: 8.3/10

TECHNICAL SKILLS

Programming: Python, JavaScript, SQL, HTML, CSS
AI & LLM Security: LLM red-teaming, prompt injection, jailbreak testing, OWASP Top 10 for LLMs, OpenAI API, Ollama
Machine Learning: scikit-learn, XGBoost, anomaly detection
Security: Vulnerability assessment, CVE/CVSS, EPSS, CISA KEV, intrusion detection
Data: Pandas, NumPy, Matplotlib, MySQL, MongoDB
Cloud & Tools: AWS (EC2), Docker, FastAPI, Streamlit, Git

WORK EXPERIENCE

Python Full Stack Developer (Gen AI), DHEE Coding Lab, Bengaluru, India Jan 2026 – May 2026

- Built an LLM-powered conversational chatbot using the OpenAI API and integrated it with the Twilio API, enabling users to book buses, flights, trains and hotels and plan holiday itineraries.
- Developed the booking pages and search functionality of the travel web application with a Python back-end and HTML/CSS/JavaScript front-end.

Artificial Intelligence and Machine Learning Intern, Quantum Learning, Remote Jun 2024 – Sep 2024

- Built and compared Random Forest and Support Vector Machine models in Python to predict stock prices from historical market data; the SVM model achieved the better performance.

PROJECTS

LLM Security Red-Team Platform | *Python, Ollama (Llama 3), FastAPI, Streamlit, Docker*

- Built an automated framework that tests LLM applications against prompt injection, jailbreak and sensitive data leakage attacks, mapped to the OWASP Top 10 for LLM Applications.
- Developed an attack library and scoring module that logs each attack attempt and classifies model responses as safe or compromised, with results shown in a Streamlit dashboard.

AI Vulnerability Prioritization Platform | *Python, XGBoost, scikit-learn, NVD API, Streamlit, AWS EC2*

- Built an ML pipeline that collects CVE data from the NVD and enriches it with EPSS scores and CISA KEV exploitation status.
- Trained an XGBoost classifier to rank vulnerabilities by likelihood of real-world exploitation, as an alternative to CVSS-only prioritisation; deployed as a Streamlit app on AWS EC2.

AI-SOC: Security Operations Platform (In progress) | *Python, scikit-learn, Isolation Forest, Docker*

- Developing an Isolation Forest anomaly-detection pipeline on the CIC-IDS2017 network-traffic dataset to flag suspicious activity and support SOC alert triage.

CERTIFICATIONS

Microsoft Certified: Azure AI Fundamentals (AI-900), Microsoft Sep 2025
Introduction to Artificial Intelligence, IBM Jan 2026

ACHIEVEMENTS

Winner, HackMitten 2025 (hackathon): team-built ML model analysing an ICD-10 medical diagnosis dataset.
Selected participant, McKinsey Forward Program 2026: programme focused on structured problem solving and AI.

LANGUAGES

English: Fluent (professional working proficiency) | **Dutch:** Beginner (currently learning)
